DETAILED ACTION

Status:

1. Claims 1-37, filed 06/22/2005 as a preliminary amendment, are pending.

Telephonic Election

2. No telephone call was made in this case given the 371 status of the case with foreign Applicants.

Election/Restrictions

3. Restriction is required under 35 U.S.C. 121 and 372. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-27, drawn to method for the heat treatment of solids containing titanium.

Group II, claims 28-37, drawn to a plant for the heat treatment of solids containing titanium.

4. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:
5. Unity exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding claimed technical features. The express "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions, considered as a whole,

makes over the prior art.” (Rule 13.2). The question of unity of invention has been reconsidered retroactively by the examiner in view of the search performed; a review of **Lapple** (US 3,578,798 – in IDS) makes clear that the claimed special technical feature, a reactor constituting a fluidized bed reactor where the gas in the gas supply system entrains solids from a stationary annular fluidized bed which at least partly surrounds the gas supply system, into the mixing chamber, is not novel over the prior art.

Lapple teaches a reactor (Fig. 1) with an annular fluidized bed, **33**, for the thermal treatment of a granular of particle-form material (col. 1, lines 65-70). Particles are discharged into tube **14** and are then entrained by the combustion gases passing upwards (col. 2, lines 49-55) and moved into the mixing chamber **33** and **37**. Lastly, the stationary annular fluidized bed at least partly surrounds the gas supply system as shown by features **14** and **33** in figure 1.

Furthermore, these references appear to demonstrate that the technical feature does not define a contribution which each of the inventions, considered as a whole, makes over the prior art. Thus, lack of unity becomes apparent “a posteriori” after taking the prior art into consideration. Accordingly, the prior art of the record supports restriction of the claimed subject matter in to the groups as mentioned immediately above.

Joint Inventors

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1793

Conclusion

-- Claims 1-37 (All pending) are restricted.
